Claims 1-18 are pending.

***Election/Restrictions***

1. Applicant's election without traverse of Group I, claims 1-9, in Paper No. 9 is acknowledged.
2. Claims 10-18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.  
Election was made **without** traverse in Paper No. 9.

***Priority***

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Information Disclosure Statement***

4. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the reference, i.e., EP0706178, has been cited by the examiner on form PTO-892, it has not been considered.

***Claim Rejections - 35 USC § 112***

5. Claims 3-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as

the invention. The terms "too low" and "which suffices" are relative and vague terms. It is not readily apparent what structure they encompass.

***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-2, 8-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Nagashima (US 5,876,823). Nagashima discloses an optical recording medium as shown in at least FIGs. 1 & 5, including: two information carrier layers 2, 6; a separating layer 10 disposed between the information carrier layers; two transparent covering layers 1, 5, which thickness substantially exceeds the thickness of the information carrier layers which are semi-transparent. As shown in the Figs. Both information carrier layers "can be" read from both sides, but "can be" written to only from one side, which condition would be met depending on the particular laser power utilized and/or whether a recording material film is utilized (see col. 14, lines 4-13). Re claim 8, it is considered that Nagashima discloses that the information carrier layers may be either write once or rewritable (see col. 14, lines 48-54). Re claim 9, it is considered that Nagashima discloses that the information carrier layers 2, 6 have a preformatted track whose rotational sense is unidirectional and whose directional sense is one of unidirectional and opposed (see col. 13, lines 28-34).

***Claim Rejections - 35 USC § 103***

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

10. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nagashima.

For a description of Nagashima, see the rejection, supra. Nagashima is silent as to the separating layer having an additional information carrier layer. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided a third information carrier layer. The motivation would have been: lacking any unobvious or unexpected results, providing a third information carrier layer (or more) would have provided a higher capacity recording medium which is a recognized design goal in this art and providing such would have resulted through routine engineering optimization and experimentation. (see also Kobayashi et al (5,703,868) which discloses four such layers).
